A large offshore oil platform is illuminated at night, with its complex structure of pipes, ladders, and storage tanks glowing against a dark sky. The platform is situated in the middle of the ocean, with a long walkway extending from the right side. The water is dark and calm, reflecting some of the light from the platform. The sky is a deep blue with some clouds.

About Prodyn

About Us

We deliver what others may not be able to deliver.

**Products and services of global standards
delivered when & where required.**

We have extensive experience in bringing together resources, experienced people, specialized equipment & efficient logistics to execute projects and services; involving Engineering, Procurement, Installations, Commissioning, Maintenance and Operations both for new plants and for up-keep and up-gradation of older plants. We are proud to achieve targets, ahead of scheduled completions, with high level of quality and safety requirements, set by our clients. All our works are done strictly to our quality and safety standards which meet the international standards.

Our Focus

- Reliability.
- Safety.
- Quality.
- Serving production and process in oil & gas and energy industries.

What We Do

Reliability. Safety. Quality.

**All our works are done strictly to
our quality and safety manuals.**

**Product
Enhancement**

**Water
Management**

**Operations &
Maintenance Service**

**Gas
Treatment**

**Experienced Team
of Professionals**

**Strong Business
Networking**

Our Expertise

Our Expertise

Offshore Platforms & Onshore Production stations- (Long Term Production)

- Operation and maintenance services and contracts
- Provision of skid packages for production enhancements
- Provision of prefabricated control houses/fire rated/class rated
- Provision of intelligent control systems, metering systems and analytical systems
- Urgent sourcing of equipment, components and parts.

FPSO's & MOPU's- (Early Production)

- Consultancy and advisory services
- Operation and maintenance services and contracts
- Provision of skid packages for production enhancements
 - Separation packages
 - Gas & Water Injection Packages
 - Gas Treatment & Conditioning Packages
 - Water Treatment Packages
 - Pumping Systems
 - Chemical Injection Systems
 - Fire Protection Systems
- Provision of prefabricated control houses, fire rated and class rated
- Provision of intelligent control systems, metering systems and analytical systems
- Provision of Intelligent Solutions to overcome problems or to enhance the performance
- Urgent sourcing of equipment, components and parts

Refineries/LNG Plants/Petrochemicals- (Processing))

- Operation and maintenance services and contracts
- Provision of skid packages for process enhancements
- Provision of prefabricated control houses, fire rated and class rated
- Provision of intelligent control systems, metering systems and analytical systems
- Provision of Intelligent Solutions to overcome problems or to enhance the performance
- Urgent sourcing of equipment, components and parts

Thermal Power plants/Solar/Wind- (NuEnergy)

- Operation and maintenance services and contracts
- Provision of prefabricated control houses, fire rated and class rated
- Provision of intelligent control systems, metering systems and analytical systems
- Urgent sourcing of equipment, components and parts
- Solar Energy solutions
- Wind Power Plants

The background of the slide is a photograph of a large offshore oil rig, likely a jack-up vessel, positioned in the middle of the ocean. The rig has a complex structure with multiple decks, cranes, and drilling equipment. The hull is painted in a dark teal or green color. The sky is a clear, deep blue, and the water is calm, reflecting the rig and the sky. The overall tone is professional and industrial.

Our Business Concept

Business Concept

Prodyn Energy Services has developed its accelerated approach to challenge ‘business as usual’ and focus on what matters most – high-quality infrastructure, reducing time to first oil, safely enhancing production, and increasing revenues.

We have developed this approach as a result of decades of experience, focusing on what is essential, eliminating the unnecessary and delivering fast, fit-for-purpose and safe systems.

Our unique, integrated design-and-build process means we can fit all the elements of a project together with no unwanted delays or gaps.

Prodyn Energy Services’s world-class team knows every inch of the global oil and gas industry, so we can identify, design, fabricate, procure or lease the right equipment at the right time – wherever it is located.

Because the accelerated approach is flexible and based on outstanding knowledge of the industry, we can adapt to fit the exact needs of each and every client without slowing the project down.

4

Our Track Record

Our Track Record

Our Team is comprised of genuinely gifted minds.

1975/1976

The first Asian made multi module (5 modules) offshore platform called Pulai A was completed at Pandan Yard at Avery Lawrence Singapore for EPMI (ExxonMobil) where our team was heavily involved in the Project, Mr.Longernecker, the project manager said: **“a great job done”**

1978/1979

A 50 MW steam power plant with GE turbine and Foster Wheeler steam boiler was commissioned in 1979 by our team.

Mr. John Dyer, the Black and Veatch consultant said: **“Contribution by your team was invaluable to overcome the technical difficulties in start- up & commissioning this plant”**

1981-1985

Under Milford Haven Automation in the early days of oil and gas in Malaysia, our team managed “Platform Maintenance Contract”; a contract growing from a team of 70 technician/craftsmen to 300 technician/craftsmen; extending to operations; a three-year contract, eventually extended to five years. It was a contract by which Malaysians first tasted the oil and gas work; the rigorous discipline.

For EPMI, it was not easy to extend the three-year contract without a retender. Mr. Daryl Archibald, the Head of offshore operation, fed by fully satisfied seventeen platform supervisors and three area supervisors (Pushcash/Henke/Robinson) of the super performance, told our director: **“We are happy if you do this contract as long as we can stretch the contract”**

1982/1985

The word of the above super performance landed many contracts in oil & gas; including “TCOT Start Up and Commissioning Contract” in 1984, “MLNG Mechanical Maintenance Contract” in 1983 for two years; “E & I contract for Platformer II” for Shell refinery, Port Dickson in 1982; and “Instrumentation Contract for Port Klang Power Station Phase 1” in 1983.a

1985

With all these multi-million-dollar projects, the contracts were managed with a small staff of 25 Malaysians; a unique feat in those early days. In 1985, the group was owned by Eldres IXL Australia. The manager of Elders IXL after a three-day review of the operations in Malaysia said: **“How do you manage all these business with such a small office and staff?”**

1998/1989

Kvearner Process Systems in Malaysia successfully developed a “world’s first plant” to separate C6 plus components (severely damaging their membrane plant) from the gas stream in Gulf Resources Plant in Sumatra Indonesia; our team playing a crucial part in the project. Mr. John Smith, after a review of the performance of the plant to our team: **“Excellent Job done”**

2001/2002

Our team developed the “world’s first” fully automated intelligent computer system to conduct FAT (Factory Acceptance Test) to test 111 single wellhead control panel; completely eliminating any human error in the tests; with a 12-step sequence which could not be manually overridden and a test certificate printed only after all the steps are satisfied. Mr. Mohd Nazir after reviewing the system and after most are tested, said: **“Aramco will try to make this Aramco standard”**

A large offshore oil rig is shown at night, illuminated by its own lights. The rig has several tall, dark cylindrical structures and a complex network of pipes and cranes. The sea is dark and choppy, reflecting the light from the rig. The sky is a deep blue with some light clouds.
